

StarDoc – Electronic Records

StarDoc is a facility-wide electronic record solution providing digital imaging of all information including medical records, personnel files, financial records, X-Rays and more. With increased demands for performance, electronic records are no longer an option but a necessity. The fully integrated StarDoc System reduces input requirements and provides for secure access to facility information anytime, anywhere.

Features & Benefits

- ✓ Fully integrated with StarSystem patient admissions to eliminate redundant entry of patient admissions data.
- ✓ Automatic indexing means you can link directly to scanned documents using search criteria familiar to you.
- ✓ Integration with StarSystem insurance processing means claim images can automatically feed the patient's electronic chart, eliminating the need to print and file backup copies.
- ✓ Eliminates reliance on paper records.
- ✓ Provides secure 24X7 facility wide access to patient records.
- ✓ Simultaneous access to patient records provides access when you need it.
- ✓ Security features allow you to limit staff access to specific sections of the patient electronic record. For example, business office staff can be prohibited from accessing the clinical portion of the patient electronic record.
- ✓ Information is tracked by the document and user, providing the compliance officer a complete audit trail of activities.
- ✓ Radiology module streamlines the process to store and retrieve DICOM compliant images of x-rays.
- ✓ Storage capacity is unlimited.
- ✓ Fax routine provides for the ability to fax scanned images directly to the individual requesting the information.
- ✓ Unlimited comments feature allows you to append notes to a scanned document for future reference.
- ✓ Multiple levels of back-up allow for a total recovery in the event of a disaster.
- ✓ Bar Coding and Optical Character Recognition (OCR) Modules streamline the process to integrate externally generated documents into the electronic record.
- ✓ ***Easily create a portable electronic record*** that can be given to the patient for use by any medical provider utilizing Windows 2000 Professional or newer systems.

System Interfaces

- ✓ StarDoc Clinical Applications
- ✓ StarFleet Financial Applications
- ✓ Picture Archiving and Communications Systems (PACS)
- ✓ Microsoft Office and other popular Windows based applications

StarView – Report Management

StarView offers the ideal solution for effective storage and retrieval of computer generated reports. StarView automatically stores, compresses and indexes reports for immediate on-screen review, verification and permanent storage. Fully interfaced with StarLab clinical and financial applications, StarView can automatically distribute clinical and financial data into the patients' electronic record.

Features & Benefits

- ✓ Reports from CSS StarSystem are fed automatically to StarView where they are automatically compressed and indexed for immediate on-screen review and verification.
- ✓ Automatic indexing of reports means that you have the ability to actually search a report based on its unique indexed fields. For example, you could search for patient John Smith on all Daily Reports generated during the month of November.
- ✓ Powerful print options give you the ability to print specific pages of a report.
- ✓ Fax reports using common desktop tools
- ✓ E-mail reports using common desktop tools
- ✓ Cut and paste data for use in other P/C tools
- ✓ Security gives you the ability to define who has access a reports
- ✓ Report access is logged automatically to insure comprehensive records for security purposes.
- ✓ Automatic exception reports helps you review and maintain the system to ensure reports are properly stored in StarView.
- ✓ Forms overlays allow for storing of a scanned pre-printed form that can be automatically “overlaid” on report data when displayed and printed.
- ✓ Elimination of paper reports saves paper costs, storage costs, and the costs of Microfilm or Microfiche services.
- ✓ StarView makes the paperless office a reality.
